ITEC 204 – Data Structures and Algorithms

Name: De Juras, Maryss Rhein L.	Date: September 24, 2026
Section: BSIT-2A	Instructor: Ms. Maxyne Nuela Ignacio

- I. **Objective:** Write a short explanation of what your program is designed to do.
(Minimum of 3 sentences)

Answer: My program is made to help manage incident tickets created by automation bots. It can **add, show, search, remove, and count tickets** using a simple list. The goal is to practice how linear data structures work in organizing and handling data easily.

- II. **Program Operations:** Briefly explain how your program performs each operation.
(Insert Specific Code Line and Your Explanation)

Add Incident: `tickets.append({"id": i, "bot": b, "desc": d})`

This line adds a new ticket to the list. It saves the details entered by the user; the ID, bot name, and short description.

Display Incidents: `for t in tickets:`

`print(t["id"], "|", t["bot"], "|", t["desc"])`

This part shows all the tickets stored in the list. It loops through each one and prints the details clearly.

Search Incident: `for t in tickets:`

`if t["id"] == i:`

`print("Found:", t["id"], "|", t["bot"], "|", t["desc"])`

This checks every ticket's ID. If it matches the one typed by the user, it shows the ticket information.

Remove Resolved Incident: `tickets.remove(t)`

This deletes the ticket that matches the entered ID. It means the issue is already fixed and no longer active.

Count Active Incidents: `print("Total tickets:", len(tickets))`

This counts how many tickets are still active using the `len()` function.

III. **Flowchart:** Create a flowchart showing the overall process and logic of your program.

IV. **Conclusion:** Briefly explain what you learned from the activity and how the linear data structure was applied.

I learned how to use a list to store and manage data in Python. This activity helped me understand how linear data structures work in real programs. It also taught me how simple code can organize and handle many records clearly and easily, just like how IT teams manage their tasks.
